# Live demos: where AI coding works better

| | | |
|---|---|---|
| 1 | **Importance of documentation** | Same code, with and without docs: docs hold what code can’t say. |
| 2 | **How to make a plan** | A checkbox plan, carried out phase by phase, boxes ticked live. |
| 3 | **Importance of planning** | Plan first vs just do it: fixing a plan beats fixing code. |
| 4 | **The utility of a RAG** | Private knowledge: no RAG vs RAG vs the whole wiki in the prompt. |
| 5 | **Hooks beat instructions** | A rule the user can waive vs a hook nobody can. |
| 6 | **Look into the data tool** | Same schema, with and without the data: looking beats guessing. |
| 7 | **Choosing the right model** | One task on three models: all pass, one costs 17x less. |
